Objective

Backend Engineer with 1+ years of professional experience building secure, production-ready systems using Node.js, NestJS, and PostgreSQL. Currently working as a freelance backend developer delivering production systems, while contributing to the Zimmah asset-tracking platform at Meta Software. Specialized in RESTful API design, authentication flows, and data integrity at scale.

Professional Experience

Junior Backend Engineer, [Meta Software](#) Smart Village | ITIDA

- Designed and implemented 10+ secure RESTful API endpoints with JWT authentication, input validation, and role-based middleware for the Zimmah platform.
- Built an ownership-transfer workflow with full audit logging, ensuring traceable history for 1,000+ registered assets.
- Applied AES encryption to secure sensitive user and asset data stored in MySQL.
- Collaborated with the frontend team to deliver 3 production features, improving response time by ~25% through query optimization with Prisma ORM.

Projects

Future Platform — Full Backend LMS, 04/2026 – Present
(NestJS, PostgreSQL, TypeORM, Swagger, Docker)
[GitHub](#) [Demo](#)

- Architected a scalable backend for a college academic system, implementing business logic for course management, student enrollment, and academic lifecycle workflows based on official regulations.
- Built a fine-grained role-based access control (RBAC) system supporting 4+ roles (admin, instructor, student, control member).
- Developed a GPA/CGPA calculation engine with support for credit-hour weighting and academic standing rules.
- Delivered full API documentation via Swagger covering 30+ endpoints.
- Deployed backend on Render with environment-based config separating development and production.

Aqnaeni — Arabic Group Game Platform, (Express, TypeScript, MongoDB) 05/2026 – Present
[GitHub](#) [Demo](#)

- Designed and built the full backend for a multiplayer Arabic debate game — covering session lifecycle, player management, host approval workflow, voting logic, and defender-reveal mechanics.
- Structured REST API under /api with clean separation across sessions, questions, and votes controllers.
- Deployed on Render with CORS configuration supporting cross-origin requests from a separately hosted frontend.

Restaurant Ordering System, (Express, JavaScript, MongoDB, Stipe) 10/2025 – 01/2026
[GitHub](#)

- Built a complete backend for restaurant operations, handling order creation, real-time status updates, and full order lifecycle management.
- Integrated Stripe payment gateway supporting secure online transactions with webhook event handling.
- Developed an admin analytics dashboard exposing order volume, revenue, and performance metrics via REST API.

Grade View — Academic Results Platform, (NestJS, TypeScript, MongoDB, ExcelJS)
[GitHub](#)

- Built a RESTful backend API for a university results system supporting secure student lookup by Seat Number and National ID.
- Developed a high-performance Excel ingestion pipeline using ExcelJS to bulk-import thousands of student records via a single POST /upload endpoint.
- Designed MongoDB schema with Mongoose for students, departments, subjects, and grade records with optimized query patterns.

Certificates

Forward Program
from McKinsey Academy, [December 2025](#).

Digital Egypt Cubs Initiative (DECI)
From the Ministry of Communications and Information Technology, [Level 1](#) & [Level 2](#)

Skills

Languages — JavaScript, TypeScript, PHP, Python, and C++
Backend — Node.js, Express, NestJS, REST APIs, JWT, OAuth
Database Management — PostgreSQL, MongoDB, MySQL, PrismaORM, TypeORM, Mongoose
Tools — Docker, Git, n8n, Mailtrap, Stripe, Swagger

Education

Bachelor's in Computer Science (in progress), 09/2025 – Present | Mansoura
Higher Institute of Computers and Information Technology
