Objective

Backend Developer with over 1 year of experience specializing in Node.js and scalable backend systems. Currently working on production-level systems, solving real-world issues, secure APIs, and authentication flows. Experienced in building production-ready architectures with a focus on performance, scalability, and system stability.

Professional Experience

Junior Backend Engineer, Meta Software [🔗](#) 02/2026 – Present | Smart Village in ITIDA

- Contributed to building and maintaining the Zimmah platform for secure asset ownership tracking.
- Designed and implemented secure RESTful APIs with authentication, validation, and middleware.
- Built systems for tracking ownership history with audit logging and high data integrity.
- Collaborated on production-level features, improving system performance and reliability.

Projects

Zimmah Platform, (TypeScript, Next.js, MySQL, Prisma) 02/2026 – Present

[Zimmah](#) [🔗](#)

- Built a platform to register and track ownership of valuable assets (phones, laptops, gold, etc.).
- Designed ownership transfer workflows with full audit logging for traceability.
- Applied high-level encryption techniques to secure sensitive user and asset data.
- Used Prisma ORM for efficient database access and type-safe queries.

Future Platform (Full LMS), 04/2026 – Present

(Node.js, Nest.js, PostgreSQL, TypeORM)

[GitHub](#) [🔗](#)

- Designed and developed a scalable backend intended to serve as a core academic system for college use, based on official regulations and business rules.
- Implemented complex business logic for academic workflows, including course management, enrollments, and student lifecycle.
- Built an advanced role-based permission system with fine-grained access control.
- Developed a GPA/CGPA engine and delivered professional API documentation.

Restaurant Ordering System, (Node.js, Express, MongoDB, Stipe) 10/2025 – 01/2026

[GitHub](#) [🔗](#)

- Developed a complete backend system for managing restaurant operations, including order creation, updates, and real-time status handling with scalable API design.
- Implemented the full order lifecycle with proper business logic to ensure consistency and smooth workflow execution.
- Integrated Stripe for secure online payments and built admin features with analytics to monitor orders, track performance, and manage the system efficiently.

Certificates

Forward Program

from McKinsey Academy, [December 2025](#). [🔗](#)

Digital Egypt Cubs Initiative (DECI)

From the Ministry of Communications and Information Technology, [Level 1](#) [🔗](#) & [Level 2](#) [🔗](#)

Skills

Languages — JavaScript, TypeScript, Python, and C++

Backend — Node.js, Express, NestJS, NextJs(API side), REST APIs, JWT, OAuth

Database Management — PostgreSQL, MongoDB, MySQL, PrismaORM, TypeORM, Mongoose

Tools — Docker, Git, n8n, Mailtrap, Stripe, Swagger

Education

Higher Institute of computers and Information Technology in Mansoura

First-year Student

09/2025 – Present
